Take **Dynamics 365** integration beyond traditional screen pops with ice Contact Center

With click-to-call capabilities, agents can conveniently save time manually typing customers' phone numbers, enabling them to click directly from the CRM lead or contact view.

While a call is in IVR, look up customer information to determine skills, priorities, and attributes to route and queue interactions. This optimizes agent productivity and improves first contact resolution.

Provide self-serve capabilities to receive ticket status or update ticket information.

Automatically populate queued emails in Dynamics 365, create associated case numbers, screen pop to agents, and reply directly within Dynamics 365 with prebuilt email templates.

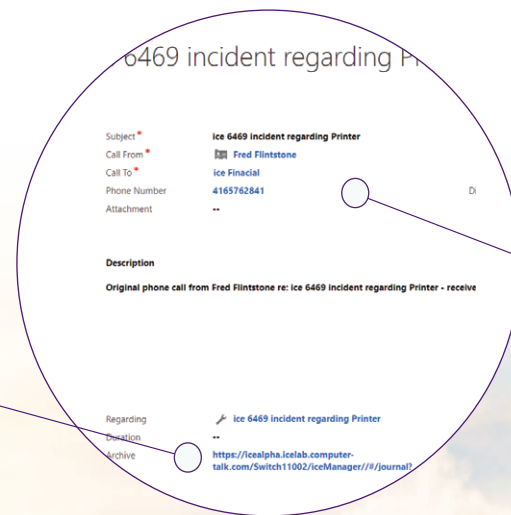

Provide users instant access to recordings and transcripts by clicking embedded URLs in custom fields, providing fast and convenient dispute resolution.

Create personalized contact center dashboards within Dynamics 365 for snapshot views.

Screen pop information from Dynamics 365 when agents receive contacts to reduce talk time and customer frustration.

For PCI compliance, auto-pause call recording when collecting credit card data. Auto-resume recording when the agent navigates to the next field.

Integrate icePay to automate payment processing via IVR. This eliminates the need for agents to request and record credit card data.

Auto-insert Activity Records to compile complete customer interaction history, equipping agents with info to accelerate resolution time. Auto-fill CRM fields to save agent time from manual entry.

Benefits

of integrating
Dynamics 365
with ice contact
center.

• Increase Efficiency

When presented with relevant customer information, agents spend less time searching different knowledge bases, pulling together context around the request, and asking the customer to repeat information.

•• Increase Profit

Agents gain insight into customers' buying habits and sales cycles, allowing agents to upsell products or expedite the sales cycle.

••• Improve Knowledge Distribution

Dynamics 365 provides organizations with a centralized knowledge base management solution, enabling employees across all departments to share and use accurate information about customers.

•••• Enhance Customer Experiences

Build routing rules into any interaction to ensure that everyone's questions, requests, or complaints will be answered. The contact treatment can be customized based on key fields in Dynamics 365 so that customers can receive a personalized experience when contact your organization.

••••• Reduce Call Duration

Customers are routed to the appropriate agent based on their account information, decreasing the number of times a customer is transferred and improving first contact resolution rate.

ice enables organizations to optimize their business processes for handling customers, prospects and partners. Interested in seeing this live? Schedule a demo with us today at:
